-!- FUNCTION: THIS IS A RECEPTOR FOR CORTICOTROPIN RELEASING FACTOR.

SHOWS HIGH-AFFINITY BINDING FOR UROTENSIN I. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLYL CYCLASE (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-!- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.

Hum. Mol. Genet. 7:2129-2133 (1998)
-!- FUNCTION: THIS IS A RECEPTOR FOR CALCITONIN. THE ACTIVITY OF
THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLYL
CYCLASE. THE CALCITONIN RECEPTOR IS THOUGHT TO COUPLE TO THE
HETEROTRIMERIC GUANOSINE TRIPHOSPHATE-BINDING PROTEIN THAT IS
SENSITIVE TO CHOLERA TOXIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-1- ALTERNATIVE PRODUCTS: 3 ISOFORMS; 1 (SHOWN HERE), 2 AND 3; ARE PRODUCED BY ALTERNATIVE SPLICING.
-1- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                             MEDLINE, 99036684.

J. NewLochem. 69:455-464(1997).
THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLYL CYCLASE. THE CALCITONIN RECEPTOR IS THOUGHT TO COUPLE TO THE HETEROTRIMERIC GUANOSINE TRIPHOSPHATE-BINDING PROTEIN THAT IS SENSITIVE TO CHOLERA TOXIN.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

Endocrinol. 7:815-821(1993).

-!- FUNCTION: THIS IS A RECEPTOR FOR CALCITONIN. THE ACTIVITY OF THIS RECEPTOR IS RECEPTOR FOR CALCITONIN. THE ACTIVITY OF THIS RECEPTOR IS REDIATED BY G PROTEINS WHICH ACTIVATE ADENYINL CYCLASE. THE CALCITONIN RECEPTOR IS THOUGHT TO COUPLE TO THE HETEROTRIMERIC GUANOSINE TRIPHOSPHATE-BINDING PROTEIN THAT IS SENSITYTY TO CHOLERA TOXIN.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-!- ALTERNATIVE PRODUCTS: 2 ISOPORMS; A AND B (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.

-!- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sexton P.M., Housammi S., Hilton J.M., O'Reeffe L.M., Center R.J., Gillespie M.T., Darcy P., Findlay D.M.; "Identification of brain isoforms of the rat calcitonin receptor.";

acid in rat.";
Endocrinology 137:4285-4297(1996).
--i- FUNCTION: THIS IS A SPECIFIC RECEPTOR FOR PARATHYROID HORMONE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLYL CYCLASE. PTHRZ MAY BE RESPONSIBLE FOR PTH EFEECTS IN A NUMBER OF PHYSIOLOGICAL SYSTEMS. IT MAY PLAY A SIGNIFICANT ROLE IN PANCREATIC FUNCTION. PTHRZ PRESENCE IN NEURONS INDICATES THAT IT MAY FUNCTION AS A NEUROTRANMITTER RECEPTOR. TISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN BRAIN, ARTERIAL AND CARDIAC ENDOTHELIUM. FOUND AS WELL IN SPERM, IN THE HEAD OF THE PEPILIDENIS. LOWER EXPRESSION IS FOUND IN VASCULAR SMOOTH MUSCLE, EXOCRINE PANCREAS, TESTIS AND PLACERTA.
SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.

The receptor protein can be used for determining the presence or amount of or separating Clb receptor binding compounds in a sample. They can also be used for producing antibodies. The receptor protein is especially used for identifying calcitonin, amylin or CGRP agonists or antagonists for treating conditions such as obesity, anorexia, pain, diabetes mellitus impaired glucose tolerance or insulin resistance.
                                                                                                                                                                                       3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the human parathyroid hormone (PTH) receptor which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                 Gaps
expressing the receptor can be used for diagnostic measurement of

The receptor protein can be used for determining the presence or amount of or separating clb receptor binding compounds in a sample. They can also be used for producing antibodies. The receptor protein is especially used for identifying calcitonin, amylin or CRPP agonists or antagonists for treating conditions such as obesity, anorexia, pain, diabetes mellitus impaired glucose tolerance or insulin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New calcitonin receptor proteins - used to identify agents for treating e.g. obesity, anorexia, pain, diabetes mellitus or insulin resistance

                                                                                                                                                                                                           A rat parathyroid hormone/parathyroid hormone-related protein (PTH/PTHrP) receptor (R92277) is encoded by CDNA clone R15B (T15947) isolated from a rat osteosarcoma ROS 17/2.8 CDNA library. The receptor a G-protein linked receptor having 7 transmembrane domains. It induces an increase in intracellular cAMP and calcium upon challenge with PTH or PTHrP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells expressing the receptor are used for diagnostic measurement of PTH

R15B, which is targeted by the antibody of the invention. The antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A human parathyroid hormone/parathyroid hormone-related protein (PTH/PTHFP) receptor (R92278) is encoded by CDNA clone HK-1 (T15948) isolated from a human kidney CDNA library. The receptor induces an increase in intracellular cAMP and intracellular free calcium when challenged by PTH or PTHrP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, adiagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein (PTH/PTHFP) receptor protein sequence was deduced from Clone R158 obtd. by screening a rat osteosarcoma (ROS) cell cDNA library to isolate those expressing functionally intact PTH/PTHFP receptor proteins, performed according to Gearing et al., (EMBO J. 8: 3676, 1899), by identifying colonies capable of binding a suitable radio-labelled ligand. The protein may be used in a therapeutic compsn. to inhibit activation of PTH or PTHFP and thus reduce the level of calcium
             screening a human kidney oligo dT-primed cDNA library in lambda gt10 and a genomic library of human placental DNA in EMBL3 with a gt10 and a genomic library of human placental DNA in EMBL3 with a probe comprising most of the coding sequence of rat bone parathyroid hormone related protein (PTH/PTHP) receptor protein. The clone encodes a protein which may be used in a therapeutic compsn. to inhibit activation of PTH or PTHPP and thus reduce the level of calcium in the blood. Cpds capable of competing with PTH or PTHPP for binding can be identified using the protein prod and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia. in the blood. Cpds. capable of competing with PTH or PTHrP for binding can be identified using the protein and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia.
                                                                                                                                                                                                                                                                                                      Gaps

This sequence represents the opossum parathyroid hormone (PTH) receptor OK-O, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA encoding parathyroid hormone receptor, DNA and antibodies - for (differential) diagnosis of hypercalcaemia, and diagnosis % \left( 1\right) =\left\{ 1\right\} =
                                                                                                                                                                                                                                                                                                                                                                                                                          Antibody to parathyroid hormone receptor - for diagnostic or
therapeutic use

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Parathyroid hormone/parathyroid hormone-related protein (PTH/PPTHrP) receptors (R92275 and R92776) are encoded by CDNA clones OK-H (T15945) and OK-O (T15946), respectively, isolated from an oposum kidney (OK) cell cDNA library. OK-H and OK-O may be the products of 2 separate genes or of a laboratory artifact. The receptor induces an increase in intracellular cAMP and calcium when challenged with PPH or PTHrP. Recombinant receptors can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hyporalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells expressing the receptor can be used for diagnostic measurement of PPH serum leveleptor can be used for diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the opossum parathyroid hormone (PTH) receptor OK-H, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The parathyroid hormone/parathyroid hormone related protein (PTH/PTHrP) receptor protein sequence was deduced form the DNA sequence of the clone OK-0, isolated from opossum kidney (OK) cells. The clone OK-0 is identical to the OK-H clone exept at the C-terminal tall as OK-0 encodes a 585 amino acid protein, OK-H encodes one of 515 amino acids. The difference is attributed to a single nucleotide deleted in the OK-H sequence causing a frame shift and an earlier stop codon. It is not known whether OK-0 and OK-H represent prods. of two separate genes or are a laboratory artifact. The protein may be used in a therapeutic compsn. to inhibit activation of PTH or PTHrP and thus reduce the
                                                                                                                                                                                                                                                                                                                                             level of calcium in the blood. Cpds. capable of competing with PTH or PTH Pire for binding can be identified using the protein prod. and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a call receptor and a ligand such as in hypercalcaemia. The protein may be used in a therapeutic compsn. to inhibit activation of PTH or PTHrP and thus reduce the level of calcium in the blood. Cpds.
                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                              Human G-protein parathyroid hormony for the human for the human further and the human further and the human first receptor, designated HLTDG74. It shows 48.2% homology to the human first receptor. Its amino acid sequence was deduced from a cDNA clone (T59619) isolated from a human T cell lymphoma tissue cDNA library. Recombinant HLTDG74 can be produced in transformed host cells and used to screen for (ant)agonist cpds. Agonists may be used to prevent or treat e.g. hypocalcaemia, hyperphosphataemia, hypoparathyroidism and chronic tetany by stimulating an increase in serum calcium levels. Antagonists can be used to inhibit the receptor e.g. for the treatment of osteoporasis, hypercalcaemia, hypoparathyroidism, hypophosphataemia, kidney stone, nephroliasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA and antibodies
